

SHRIYUT JANARDAN

Asansol, West Bengal, India | +91-9234600599 | your.email@example.com | linkedin.com/in/shriyutjanardan | github.com/code-with-shriyut

OBJECTIVE

CSE undergraduate and aspiring Data Scientist with hands-on experience in Python, ML modeling, and data analytics, seeking a full-time Software or Data Engineering role through campus placements. Published researcher (NCCCIoT 2026) with a track record of building and deploying end-to-end ML systems and leading data-driven competition teams. Focused on FinTech, risk analytics, and predictive modeling. Eager to contribute to large-scale technology programs while growing across enterprise software and data domains.

EDUCATION

Asansol Engineering College (AEC) <i>Bachelor of Technology – Computer Science And Engineering</i>	Asansol, West Bengal Oct 2024 – Jul 2027 (Expected)
Acharyya Prafulla Chandra Ray Polytechnic College <i>Diploma in Computer Science and Technology</i>	West Bengal Sep 2021 – Jun 2024

TECHNICAL SKILLS

Languages: Python, SQL
Libraries & Frameworks: Pandas, NumPy, Scikit-learn, XGBoost, SHAP, Matplotlib, Seaborn, Streamlit, FastAPI
Data & ML: EDA, Feature Engineering, Regression, Classification, Risk Modeling, Model Benchmarking
Tools & Platforms: Git, GitHub, Jupyter Notebook, VS Code, Power BI, Microsoft Excel
Domain Knowledge: FinTech Analytics, Health Insurance Pricing, Credit Risk, Business Intelligence

PROJECTS

InsureAI – Health Insurance Premium Prediction System <i>Python, Scikit-learn, Streamlit</i> GitHub	2025
- Led a team to build a premium prediction engine, managing the core data pipeline, preprocessing, and overall project structure. - Developed baseline Linear and Lasso models to set clear performance benchmarks, enabling the team to evaluate 5 algorithms and select a champion Random Forest model ($R^2 = 97.89\%$). - Built an interactive Streamlit web application to deploy the final model, making complex premium calculations easily accessible and transparent for non-technical users. - Co-authored a research paper (NCCCIoT) detailing our methodology, emphasizing model explainability and identifying real-world actuarial risk drivers like smoking and BMI.	
Loan Risk Analyzer <i>Python, XGBoost, SHAP, FastAPI, Streamlit, SQL</i> GitHub	2026
- Built a hybrid credit underwriting system combining rule-based financial screening with XGBoost-based default prediction and SHAP explainability. - Implemented FOIR analysis, EMI affordability evaluation, employment stability checks, and alternative financial behavior scoring to classify applicants into LOW, MEDIUM, and HIGH risk categories. - Developed and deployed a full-stack application with FastAPI backend, Streamlit frontend, JWT authentication, SQL-based application tracking, and human-readable lending explanations.	

ACHIEVEMENTS & ACTIVITIES

Scored 82% in the Analytics Assessment conducted by Fractal Analytics via Ikigai.ai	Feb 2026
Research Paper Accepted – “InsureAI: A Machine Learning Approach to Medical Insurance Cost Prediction” selected at NCCCIoT National Conference	2026
Team Leader – UIDAI Datathon (Government Data Analysis & Problem-Solving Competition)	2026
Attendee – Google DevFest, Kolkata	2025
